

Workshop on Computational Fluid Dynamics (CFD)
with OpenFOAM
IMP-PAN Gdansk

Tutorial #2: Water-air Ejector
Multiphase Transient Flow

Robert Castilla
CATMech - Universitat Politècnica de Catalunya
Department of Fluid Mechanics

2025-26
Version 1.0

Contents

1	Introduction and Theoretical Background	2
1.1	Case Overview	2
2	Case Setup	2
3	Running the Simulation	2
4	Post-Processing in Terminal	2
5	Visualization in paraview	2
6	Student Exercises and Extensions	2

Learning Objectives

By the end of this tutorial the student will be able to

1. **Navigate** OpenFOAM case directory structure
2. **Understand** basic OpenFOAM file formats
3. **Run** a simple transient simulation
4. **Analyze** basic results in terminal and **paraview**

1 Introduction and Theoretical Background

1.1 Case Overview

2 Case Setup

3 Running the Simulation

4 Post-Processing in Terminal

5 Visualization in paraview

6 Student Exercises and Extensions

Disclaimer

This tutorial has been developed by **Robert Castilla**, of the Departament of Fluid Mechanics in the Universitat Politècnica de Catalunya, for the doctoral workshop at **IMPPAN Gdańsk** (July 2026). The author utilized **DeepSeek** for the initial definition of the document format. Further technical refinement and the development of advanced post-processing exercises were supported by **NotebookLM**. All the technical information for the **OpenFOAM v2512** environment and all physical interpretations were performed and approved by the author.
